PHOSPHATIDYLCHOLINE

SODIUM DEOXYCHOLATE

ACETYL HEXAPEPTIDE-8

L-CARNITINE

PALMITOYL PEPTIDES

APPLICATION

ARMS

BACK AREA & BRA LINE

WAIST & LOVE HANDLES

UPPER & LOWER ABDOMEN

BUTTOCKS

INNER & OUTER THIGHS

RECOMMENDATION

ARMS

Inner & outer upperarms
(0.05ml – 0.2ml per point)

BACK AREA & BRA LINE

To get more beauty in dressing style
(0.1ml – 0.2ml per point)

WAIST & LOVE HANDLES

Defines curve & shape
(0.15ml – 0.2ml per point)

ABDOMEN

Reduces Upper & Lower belly fat
(0.15ml – 0.3ml per point)

BUTTOCKS

Reduces fat, define line under the hip
(0.05ml – 0.15ml per point)

INNER & OUTER THIGHS

Shaping & fat reduction
(0.15ml – 0.2ml per point)

COMPOSITION & FUNCTIONS

01. PHOSPHATIDYLCHOLINE

Phosphatidylcholine or well known as PPC, is extracted from plant sources. In humans, PPC also found as an important component of bile and facilitates fat digestion. It has the strongest effective lipolytic action and become a first choice in meso lipolysis procedure targeting localized fat deposits.

PPC acts like emulsifier, when injected into the target area, it dissolves the unwanted fat, release the fat in Triglycerides form into blood stream to be naturally discharged from our body.

02. DEOXYCHOLATE

Deoxycholate / Deoxycholic Acid also used in many lipolysis solution, and it also known as a secondary bile acids in humans, and has been used in various field of medicine.

Deoxycholic Acid destructs fat bilayers membrane, freeing the fatty acids inside to be destroyed and removed.

03. L-CARNITINE

Is an amino acid derivative that transports fatty acids into body mitochondria to be oxidized. After the process of breaking membranes and destroys the fat (fatty acids), the remains need to be removed from cells into our metabolism systems. L-Carnitine acts as carrier / transporter to promote this process.

04. PEPTIDES

After the lipolytic process in destroying & removing the fat cells, the remaining spaces will be empty, and begin to sag & uneven due to loss of elasticity during its stretching time filled by fat.

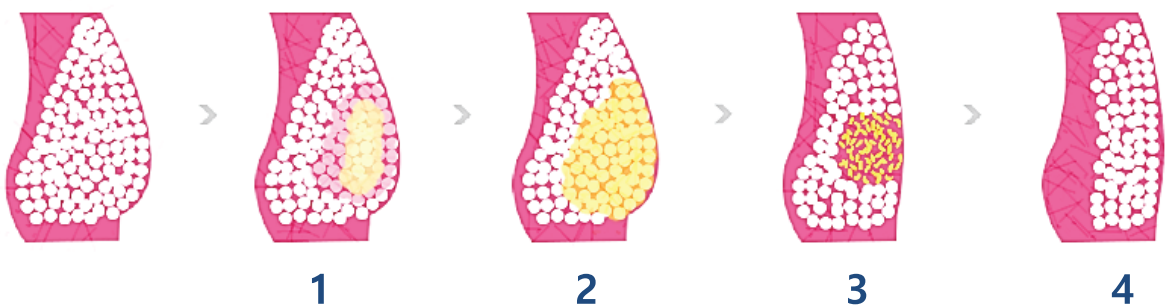

SiiLK Skinee contains Acetyl Hexapeptide-8, a neurotransmitter blocker, acts as 'Botulinum Toxin effect' to reduces wrinkles, and regenerates elasticity. It also contains Palmitoyl Tetrapeptides-4 and Palmitoyl Tetrapeptides-7 to promote cells formation and healing tissue, helps to restore skin irregular & uneven appearance.

BENEFITS & HOW IT WORKS

ACCUMULATED FAT

1. Deoxycholate destruct & destroys fat cells membrane
2. PPC breaks in and dissolves the fat cells
3. Shrunk fat cells carried by L-Carnitine to body's mitochondria to be removed
4. Peptides promote healing to the empty space, improves cells formation & elasticity, tightens contour, reduces wrinkles, and maintain the appearance.

PRODUCT INFORMATION

STORAGE

- Protect from direct sunlight
- Store below 30 degrees Celcius
- Store opened products inside refrigerator at 10 to 15 degrees, use it within 15 days

CAUTIONS

- Shake well before use
- For subcutaneous injection only
- Must not injected to nerves densely concentrated areas
- Do not use to patient with allergy to soybeans, pregnant patient, & patient during lactation period
- After the procedure, avoid : tight clothes, friction, alcohol, high fat food, and heavy exercise
- Drink lukewarm water over 1 liters/day

COMPOSITION

PHOSPHATIDYLCHOLINE

High purified PPC from plant extract
equivalent with 10% PPC
Strong lypolytic solution

SODIUM DEOXYCHOLATE

Destroys fat membranes & dissolves fat

L-CARNITINE

Fat carrier, reduces fat, & promote whitening

ACETYL HEXAPEPTIDE-8

Neurotransmitter blocker, reduces wrinkles

PALMITOYL PEPTIDES

Promote cells formation & tissue healing

PACKAGE

10ml x 6vials

+82-(0)10-6365-3328
