## MAIN INGREDIENTS :

### HYALURONIC ACID

Is the primary ingredient found in the wrinkle fillers used by dermatologists. Hyaluronic Acid helps to promote collagen synthesis, and play important role to maintain water hydration level in the skin.

### ACETYL HEXAPEPTIDE (AHP)

AHP widely used as major high functional beauty ingredients to reduce wrinkles, makes the skin & muscles firmer and more suppler. It is also named as 'Botulinum toxin-like' ingredient as both mechanism has similar path.

AHP has been proven giving results in 30 days, decreases the visible effects of aging by reduces the deep lines and wrinkles.

# TRANSMI PATCH

## TECHNOLOGY :

### DISSOLVING MICRO STRUCTURE (DMS)

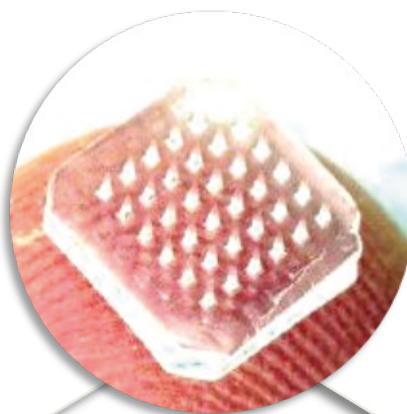

TRANSMI PATCH Is a transdermal insertion system patch, designed with **DMS (Dissolving Micro Structure)** technology. DMS is an advanced "*deep infusion system*" for excellent wrinkle care, reduces blemishes, and enhances skin elasticity.

The patch's strong micro needle structure made by **Hyaluronic Acid** combined with other active ingredients.

When the patch attached to the skin, the micro-needle creates micro channel for deep penetration, and it dissolved. This mechanism allows Hyaluronic Acid (from the dissolved micro-needle) and other ingredients infuse into the dermis layer.

TRANSMI PATCH use a **hydrocolloid (HC)** base film, a water type base dressing film that contains gel-forming agents in adhesive compound laminated onto a flexible – water resistant outer layer.

The HC films are self-adhering and keep the wet environment during the use. This wet condition helps skin softening, promote collagen synthesis, and retains moisture.

- Micro Tip (5-40um)
- Tiny Diameter (<200um)
- Controlled Effective Length
- Solid – Dissolving type
- Painless

## HYALURONIC ACID MICRONEEDLE PATCH

## TRANSMI PATCH APPLICATIONS

**Dark Circle  
Under Eyes Puff & Eye Bag  
Smiling Lines Fold  
Lines & Wrinkles  
Scars  
Neck Lines**

Removes the white films on the patches.

Attach the patches on the desire area.

Removes the transparent films and press vertically several times.
